

MULTIBLOCK

– the intelligent addition to Eletta Flow monitors

User Advantages

No process disruption during maintenance

Saves time and reduces maintenance costs

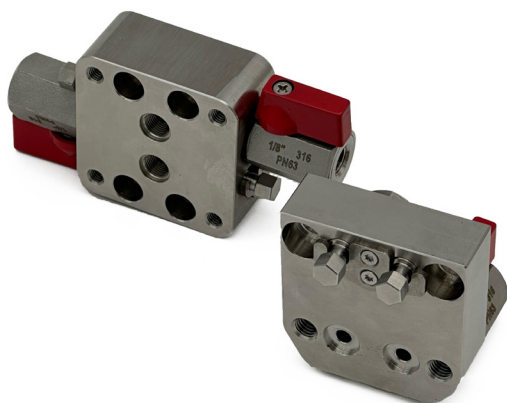

Flexible use - even during ongoing processes

No need to modify the piping system

Easy upgrade - plug & play

Multiblock

The Intelligent Add-On for Eletta Flow Monitors The Eletta Flow Multiblock is a versatile and innovative solution that extends the functionality of both new and existing Eletta Flow monitors. It offers a range of practical features that simplify operation, maintenance, and analysis - without affecting the process flow.

Technical compatibility

Multiblock is compatible with all models in Eletta Flow's product portfolio for differential pressure measurement. Easily adapted for both new and existing installations.

Features and Benefits

- 1 Air venting at Startup**
Removes air from pressure channels to ensure accurate readings from the very beginning.
- 2 Shut-Off During Operation**
Allows the control unit to be isolated from the piping system. Maintenance and inspections can be carried out while the process is running
- 3 Cleaning of Internal Channels**
Cleans the channels between the pipeline and the control unit. Ideal for media with particles or sludge - without the need to stop the system.
- 4 Calibration**
Connect an external third-party DP flow meter to verify and calibrate the Eletta Flow monitor without interfering with the pipeline.
- 5 Temperature Sensor Integration**
Enables connection of third-party sensors without pipe modifications - for extended process monitoring.
- 6 Sampling**
Take samples of the process medium directly from the multiblock for analysis and inspection - easily, quickly, and without affecting the system.
